

IMPACT CRUSHERS

AP / APPS / APS

Engineers and Manufacturers of Washing, Vibrating and Crushing Equipment

Description

Trio's line of **Horizontal Shaft Impact Crushers** comprises a versatile selection of crushers ranging from small secondary units to large primary units.

With rotor options that include open and solid rotor construction, and 2, 3, and 4 row configurations, the various models can be equipped to satisfy most applications and operator preferences.

The crushers come complete with hydraulic adjustment mechanisms for primary and secondary curtains. This provides outstanding operational ease as liners and blow bars wear. Rather than burdensome mechanical adjustments, these machines can be adjusted with a simple to use hydraulic cylinder.

The crushers are routinely installed in stationary and portable crushing systems. All of the rotors utilize an operator friendly centrifugal wedge system. The rotor is also designed in a manner to minimize the likelihood of catastrophic damage caused by blow bar breakage.

All machines use greased bearings. They are also all equipped with hydraulically operated hoods. Blow bars are available in manganese, various compositions of chrome steels. Important features to consider when comparing Trio's impact crushers with other brands are:

- Bearing Size
- Shaft Size
- Machine Weight
- Blow Bar Weight

When accurate comparisons are made, you will find that these Trio crushers are some of the heaviest-duty machines available.

Applications

- Primary and Secondary Hard Rock Crushing
- Mixed Demolition Debris
- Crushed or Broken Concrete
- Asphalt
- River Rock

Premium Features

- Hydraulic Primary and Secondary Curtains
- Oversize Bearings and Shaft
